FIELD AVIATION EAST LTD CAPABILITY LIST
AMO 13-74

COMMENTS:

1. The attached lists define Field's current in-house component repair capability under the Avionics, Instrument and Component specialized maintenance categories. This list is sorted by Part Number.
 - a) The notation "System" in the "Remarks" column indicates that we must have all the units from the system in question in order to carry out testing.
 - b) In the event that equipment cannot be repaired in our shop, Field has access to the manufacturers and other specialised repair facilities.
2. A listing means that Field has technical information and expertise on whatever is listed.
3. In some instances the major unit in a system is noted, i.e. DF-203 (51Y-4).
4. Headsets and similar minor pieces of avionics or electrical (loose equipment) are within Field's avionics repair capability, but are not listed in this report due to these items not being considered an "Aeronautical Product" by definition and not identified in CAR Part V, Standard 573.02 under any avionics category ratings group.
5. The "Publication" column lists the Avionics library document number for the Manufacturer's instructions for Continued Airworthiness.
 - a) "ATP" indicates that the instructions are included in the ATP Navigator Electronic Publications.
 - b) If the "MFG" is Field Aviation, the column indicates the document number which is held in the main library.
